

SOLTIS[®]
AIR

FERRARI

Technical data	Soltis Air®	Standards
Weight per sqm	330 g	<i>NF EN ISO 2286-2</i>
Width	180 cm	
Tensile strength (warp/weft)	230/200 daN/5 cm	<i>NF EN ISO 1421</i>
Light transmission	5% to 25% according to colours	
Maximum temperatures (while handling)	-30°C / +70°C	
Quality Insurance System	ISO 9000	

The above values are given by way of information and can be changed at the discretion of the manufacturer.

DEMAND HIGH PERFORMANCE FABRIC

Thermally effective, resists bad weather conditions, outstandingly long life-span... SOLTIS AIR® is the only textile especially for retractable awnings and projection awnings that combines all of these advantages! Because of its extraordinary qualities, renowned architects don't hesitate to use SOLTIS® textiles in their most prestigious projects.

The SOLTIS AIR® structure is made up of high strength polyester thread. A coincidental choice, since nothing has been left to chance; this thread is the same that is used to make automobile tires. Extremely solid, it resists high mechanical stress and large temperature fluctuations.

UNIQUE TECHNOLOGY THE FERRARI PRECONSTRAINT® PROCESS

Stretched fabric, sag pockets after a downpour... From now on you can have incomparable dimensional stability with SOLTIS AIR®. What's its secret? An exclusive process consisting of maintaining the textile's total surface area stretched during the manufacturing cycle. SOLTIS AIR® does not lose its shape.

BENEFIT FROM TOTAL SAFETY

IN CASE OF FROST:

In general, the cold hardens materials and makes them easily breakable. The polyester used for SOLTIS AIR® remains extremely flexible, even at very low temperatures. The proof: the 1000 external awnings at the Oslo airport (-25°C) are exclusively fitted out with the SOLTIS® textile.

DOES NOT TEAR:

Thanks to its high strength polyester structure and its exclusive manufacturing process, SOLTIS AIR® textile guarantees incomparable sturdiness. Even if it is accidentally cut, it will not tear any further.

WITH STRONG WINDS:

Mechanical stress, due to the wind or to repeated manoeuvring that is executed too hastily, is often synonymous with fabric tearing. Tested in windy conditions of over 100 km/hr., SOLTIS AIR® has unprecedented mechanical strength.

IN THE RAIN:

SOLTIS AIR® does not allow water to penetrate into its fibres. Even better, its micro-aeration permanently ventilates the textile even when it is rolled up.

5-YEAR GUARANTEE:

Ferrari guarantees SOLTIS AIR® for 5 years thanks to this textile's incontestable performance under normal operating conditions.

A SAFE TEXTILE:

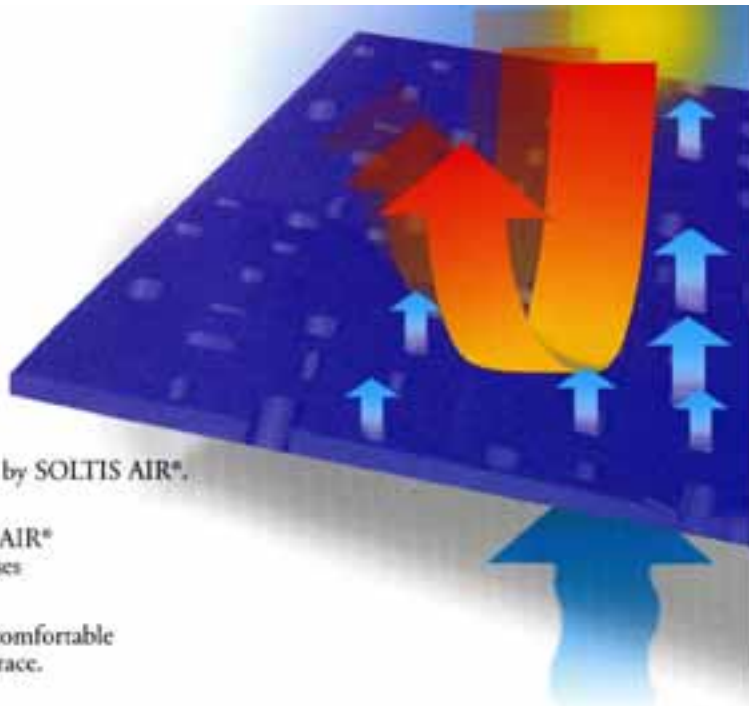

The ÖKO-TEX certificate for SOLTIS AIR® textile guarantees that the textile is not harmful to mankind. SOLTIS AIR® is the textile giving total reliability.

TAKE A BREATH OF FRESH AIR

With SOLTIS AIR® that stuffy feeling disappears under the awning:

- 1 • Like a heat shield, SOLTIS AIR® is placed between you and the sun to stop solar radiation.
- 2 • The heat is thus stopped and absorbed by SOLTIS AIR®.
- 3 • Thanks to its micro-aeration, SOLTIS AIR® evacuates the absorbed heat which causes that stuffy feeling.
- 4 • The temperature under the awning is comfortable you can take full advantage of your terrace.

SAFELY TAKE FULL ADVANTAGE OF THE SUN

The sun's UVA and UVB rays are often the cause of premature skin aging, sunburn, and other health risks. It's therefore better to opt for the best strategy to combat them. With a SOLTIS AIR® awning you can stop 95% of this unwanted radiation... and you are completely protected.

KEEP YOUR AWNING LOOKING IMPECCABLE ALL THE TIME

The materials and manufacturing method used for SOLTIS AIR® help keep the textile clean all the time and thus keep its original shine in the long term. Atmospheric, vegetal or industrial pollution, pollen, sandy rain... with the swipe of a soapy sponge, your textile regains its original luster.

INHALE... IT NEVER SMELLED SO GOOD

When the SOLTIS AIR® textile is manufactured, Ferrari adds a natural scent.
